Method of Utilizing Radiant Energy

Radiant Energy and Its Role In Our Free Energy Future

Peter Lindemann, DSc

Nikola Tesla's Magnifying Transmitter, T. Henry Moray's Radiant Energy Device, Edwin Gray's EMA Motor, and Paul Baumann's Testatika Machine all run on Radiant Energy. This natural energy form can be gathered directly from the environment (mistakenly called "static" electricity) or extracted from ordinary electricity by the method called "fractionation." Radiant Energy can perform the same wonders as ordinary electricity, at less than 1% of the cost.

As you will learn, it does not behave exactly like electricity, however, which has contributed to the scientific community's misunderstanding of it. The common feature connecting all of these discoveries, is that they use a small amount of one form of energy to control or release a large amount of a different kind of energy. Many of them tap the underlying Æther field in some way; a source of energy conveniently ignored by "modern" science.

Tremendous breakthroughs in energy creating technology will provide society with the opportunity for a complete re-distribution of wealth and economic power! Thus the appearance of Free Energy in the public domain occur with the simultaneous appearance of a new, worldwide social contract. Free Energy technology will raise all of the world's poor out of economic slavery, setting the stage to settle other political, racial, and religious disagreements among the world's people.

Antigravity Effects In Nature

Dan Davidson

The gravity flows that originate from higher levels of creation will be presented and shown how they establish the matrix for the manifested physical universe as we observe it. A few examples will be discussed: in the plant kingdom, at the atomic level, the solar planetary resonance level and the insect domain. This research supports the Global Scaling developments by Dr. Helmut Mueller that show the natural universe is sustained and supported by these creative forces that permeate the universe from the subatomic to the galactic and super-galactic levels. The source of these creative "flows" will also be briefly discussed.

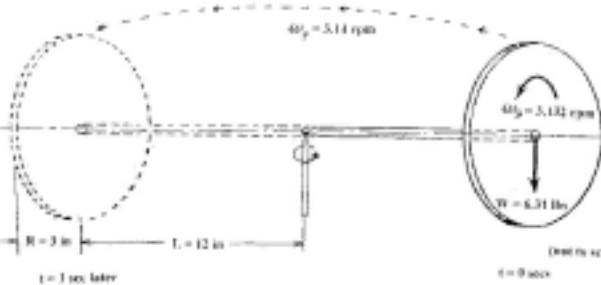

There are well researched (i.e., proven) anti-gravity effects in Nature in the material realm as well as the plant and insect kingdoms. In the insect realm there is strong evidence that the June bug beetle wing was used in the Grebennikov gravity platform to achieve the spectacular effects recorded by Grebennikov includ-

Scanning Electron Micrograph of a June Bug Inner Wing at 1000X by Dr. Ted Loder (University of New Hampshire).

ing apparent time travel, forcefield generation, and high speed travel. New detailed scanning electron microscope pictures of the nano structures of the wings of the common June bug will be discussed and show how they could be the long sought after "bug" that Grebennikov used to build his flying gravity platform. There is a strong correlation of the nano structures of the wings with the Shape Power effects discovered by the author and the Stowe gravity theories of the aether.

Plants and especially trees exhibit anti-gravity effects and have been measured. This analysis shows that plant branching and nodes are the result of horizontal and vertical gravity waves that govern the structure of plants. Included in this research paper will be the frequencies, wavelengths, and wave speeds.

Inertial Propulsion The Holy Grail Of Space Travel

Harvey Fiala

This paper will give a definition of Inertial Propulsion and a brief summary of some of the different approaches that have tried achieve it or claim to have achieved it. In a strict sense of the word, Inertial Propulsion is the ability to move or accelerate a body in some direction without the use of a propellant or the application of an external force.

The energy required to accomplish this must be contained within the body (for limited movement or acceleration), or the body may generate the required energy by harnessing energy that may be present in the aether, whether it is electrical, mag-

netic, nuclear, gravitational, acoustic, or zero point energy for unlimited movement or acceleration. A simple example of Inertial Propulsion moving 6.31 pounds a distance of 24 inches using Natural Precession of a simple spinning disk as shown above. The presentation reveal additional details of this and other devices.

Any form of energy present in the vicinity of the body may be said to exist in the aether occupied by the body unless the energy is shielded from entering into that space. A brief account of the NASA Breakthrough Propulsion Physics Project will be given.
