

## Practical Quantum Energy Extraction

**Gary Tripp**

We live in sea of energy, but we have constructed a mental cage that prescribes with religious fervor that energy is scarce. The best known and most sacred of physical laws is the Conservation of Energy, First Law of Thermodynamics. Right in front of our eyes and everywhere we look, energy flows freely from the Quantum Field to the Physical Field. This energy transfer happens all the time. It is just not well recognized for what it is. When sunlight heats the earth or strikes a solar cell, it does work by transferring energy from the Quantum Field of electromagnetism to the Physical Field. When gravity changes the course of meteorite, it does work. Magnets are the bridge between the Quantum world of infinite energy and the Physical world of limited energy. When a magnet approaches a coil of copper wire, it causes electrons (electricity) to flow in the wires and does work by transferring energy from the Quantum Field to the Physical Field.

This transfer of energy caused by an approaching magnet is the source of the energy transfer that Infinity SAV USA's generator uses to create electricity. The Law of Conservation of Energy does apply. Magnetism is caused by the quantum-mechanical spin of unpaired electrons. We believe our invention is transferring energy from the Quantum mechanical spin of electrons to physical motion and then to electricity.

## Hans Coler Generators

**ZPE, Resonance and Magnetism**

**Dr Thorsten Ludwig**

Hans Coler was the inventor of two famous *overunity* generators known as the *Magnetstromapparat* (magnetic current apparatus) and the *Stromerzeuger* (current generator). Mainly because of a British intelligence report his work was not forgotten. The devices were reconstructed and tested. Reports stated the devices produce electric energy and work on the basis of magnetized material. The maximum output for a Coler current generator was 6 kW. After extensive work on the Coler generators, we present new measurements and experiments. Recent research studied the interlinked and entangled magnetic, electric and mechanical resonances of the device. We believe this is the key of this technology. Coler found a way to build resonant circuits that tap zero point energy (ZPE), the sea of energy that we live in.

The current generator consists of two stacks of large copper plates with flat coils in between. There is also an exciter circuit of soft iron cores with several layers of coils around it. There is a similarity between the Coler current generator and the Norby generator (Swedish patent 159,487). Since the power is to be generated by electrons passing through a premagnetized ferromagnetic material, the link is made to vacuum fluctuations and ZPE as a possible energy source. New physics shows that, the quantum energy of space, zero point energy, is the power that leads to and sustains magnets!

## Vendor Showcase

Not all of the new and exciting technologies make it on stage. Often, some of the best technologies are in the expo area. As a feature, we allow the vendors an opportunity to give a 5-10 minute presentation on the products that they brought to the conference. This activity is restricted to the vendors who are not speaking at the conference.

## CONCURRENT CONFERENCE

# COFE 11

Friday-Saturday

Aug 9 — Aug 10

COFE traditionally fulfills the mission statement of Integrity Research Institute to "research scientific integrity in the areas of energy, propulsion, and bioenergetics" so original papers on those vital topics are invited.

The COFE11 speaker schedule will be posted at the conference, A written proceedings of the conference will be available for purchase. DVDs will be available at the site.

**Attendees of the TeslaTech Conference can attend the COFE11 lectures FREE.**
