

## Healthcare's Greatest Risks and Blessings

**Leonard Horowitz  
DMD, MA, DNM, DMM**

Generally overlooked by mainstream media and medicine, Dr. Leonard Horowitz's work focuses on the organizations and institutions that profit from global genocide and population control under the guises of public health and national security. A stunning glimpse into the politics of medicine, which appears to be controlled by a global petrochemical-pharmaceutical cartel, should inspire everyone to take control of their own health. This politically sensitive information is vital to intelligent decision-making.

It concerns effective preparedness against outbreaks, nuclear explosions, and other disasters that may occur during the Age of Bioterrorism which medical pundits predict will devastate global populations and prophets proclaim heralds the Messianic Age. Most assuredly, the Spiritual Renaissance is accelerating, as are rates of morbidity and mortality among our friends, family and global community.

This brief presentation summarizes the world's greatest challenges and opportunities impacting natural healing and energy medicine with an inspiring view towards winning against all odds. This is truly an extraordinary message of hope at a critical time in human history.

## Understanding Parasites in the United States

**Omar Amin PhD**

While media attention is focused on our food supply being compromised by bacterial infections such as *salmonellosis*, we face other growing threats from a variety of parasites. For instance, the Ascaris round worm grows to a foot long and is devastating. Infection can occur by eating unwashed fresh vegetables (lettuce) contaminated with soil fertilized with infected human waste. Heavy infection can cause blockage of the intestinal tract, penetration of the gut wall, and peritonitis. Larval worm migration damage lymphatic, respiratory, and hepatic tissue. The diagnostic egg of the one foot long Ascaris round worm (shown above) is detected in fecal samples.

This power-point presentation covers the diagnosis, pathology, and treatment of human parasitic infections in the United States. A brief introduction to laboratory procedures, misdiagnoses/mistreatment, and impact on public health is made. The following section provides a systematic treatment of protozoan and helminth (worm) parasites, emphasizing epidemiology and exposure, symptoms, gross pathology, and herbal and allopathic remedies.

All topics are presented with illustrative labeled pictures of the various kinds of parasites and their gross pathology in human tissues. Armed with this knowledge, you can take precautions!

## Reconstructing Rife Deconstructing Myth.

**Turning Urban Legends Into A New Science**

**James Bare DC**

Frequency device usage is growing at an exponential rate due to two reasons – cost effectiveness and treatment effectiveness. These two reasons have resulted in the production of over 1 million frequency devices of all types. It may be hard to believe, but such numbers are probably low! Frequency devices take many forms, and range from the simplest zappers and LED's to complex pulsed Radio Frequency transmitters. Treatment via frequency devices is part of our future.

This presentation explores the claims of efficacy that are applied to frequency instruments based upon concepts and understandings that were developed over 70 years ago. Many of these concepts are wrong, many are outdated, and many are no more than urban

legends. Modern scientific discoveries and understandings behind the operation of frequency devices will be discussed as well.

The lecture will expose the errors of the past, and take people in new directions which have not been discussed publicly before. Some of the topics to be discussed will be

- frequency control of specific genes;
- the upcoming revolution in the treatment of genetically linked disease;
- the "bioelectric effect";
- creating new frequencies;
- cancer treatment and the treatment of infectious diseases.

Extensive research reveals that how frequencies work to create physiologic effects is something very different than once believed!
